Experience

Google Cloud Canada	Remote
Technical Solutions Engineer	2021-Present
• Manage customer issues through effective diagnosis, resolution, or implementation of new investigation tools • Specialized in a variety of serverless products including Google Kubernetes Engine, App Engine, Cloud Run, Cloud Functions, Cloud Build, and Firebase Suite • Develop an in-depth understanding of Google’s product technology and underlying architectures • Assess customer issues and advocate for their needs with cross-functional teams, including product and engineering teams	

Indigo Books & Music	Toronto
Full Stack Developer Intern	2017-2018
Projects include Competitive Pricing, Catalog Cloud Migration (CCM) & Cloud Pricing Dashboard (CPD)	
• CCM: Built an internal system in C# to programatically populate cloud based noSQL (Azure Tables) catalog using Azure Message Bus Pub/Sub topics and subscriptions with on premise SQL catalog entries; Team based project utilizing agile methodologies (Scrum) • CPD: Introduced Azure Cloud Pricing into an internal dashboard, made with React Visual Libraries and Azure Consumption APIs for C#, for easy cost viewing and analysis.	

Projects

Spelling Bee
Source
• Written in Rust and powered by a Github Action that runs each night to produce a unique puzzle every day. • Frontend, written in Angular, designed to be mobile first to provide an app-like experience.
